● = Standard    ○ = Optional    — = N/A

N.B The use of a self closing device on a fire rated system is at the decision of the building inspector

## ANTI WARP PROFILE

This U shaped profile fits into the bottom of the door and ensures the sliding action remains smooth over time even if the door should warp.

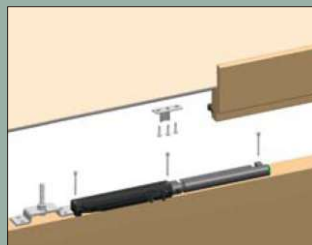

No floor track at all, no threshold needed, you can continue your flooring right through the opening.

POCKET DOORS .CO.UK

## SOFT CLOSE

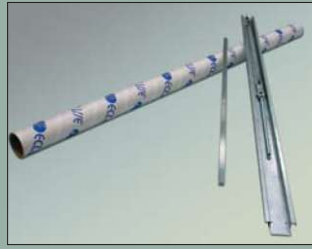

A futuristic addition for any single or double system. Just slide the door towards it's closed position and at a certain point the door takes over and softly closes itself.

Useful, easy to use and increased safety from trapped fingers, once you used it there is no substitute.

Available in three versions :

- For doors up to 40kg
- For doors up to 40-60kg
- For use with self closing mechanism

## SELF CLOSING MECHANISM

The self closing mechanism is an ingenious system which is completely enclosed inside the frame and allows the door to close by itself, with no input from you whatsoever.

- Adjustable closing speed
- Suitable for wooden doors only
- Completely invisible from the outside

## DOUBLE DOOR CO-ORDINATION

The double door co-ordination allows two doors to open and close simultaneously, by just opening and closing only one of the them.

- The cable has been specially developed for its strength and resistance to stretch over time. It is a 132 strand, 2mm stainless steel cable complete with a zinc plated 1.5mm spring.

## TELESCOPIC SYNCHRONIZATION SYSTEM

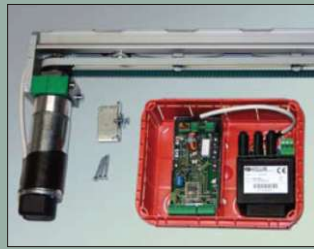

The synchronisation system opens and closes two double doors in the same direction.

As soon as you start opening the first door, the second door also starts opening and they progress together until fully opened with no damage, banging or bounce back.

- The cable has been specially developed for its strength and resistance to stretch over time. It is a 132 strand, 2mm stainless steel cable complete with a zinc plated 1.5mm spring.

## MOTORISED UNIT

An electronically controlled motor drive system for internal use that is completely contained within the system itself. The automatic opening and closing of the door has a slower controlled closing speed and works simultaneously with double doors.

- For Single, Double and Unilateral versions
- 100mm finished wall thickness
- Max 70kg. per door panel
- Max door panel height 2400mm
- Activators: push button, infrared detectors, remote control, radar sensor

Specifically developed in line with all European regulation regarding motor drives and electromagnetic compatibility.

The system has been designed to allow manual opening/closing after 10 seconds should there be a power failure.

## DOOR FURNITURE

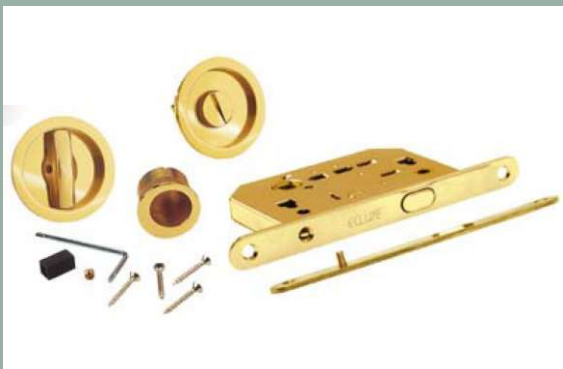

### SIMPLE FLUSH PULLS

Ideal for single sliding doors where locking is not important. Supplied with finger pull for use in the leading edge of door.

Order two sets for double doors.

Dimensions:  
Outer Diameter 57 mm,  
Internal diameter 47 mm.

### BATHROOM LOCKS

Specifically designed for use with bathroom/wc. These locks have internal thumb turn and external emergency opening. Also included is a finger pull for use in the leading edge of door.

Available for 35mm or 44mm doors.  
Please specify when ordering.

Dimensions:  
Outer Diameter 57 mm,  
Internal diameter 47 mm.
